# SS80<sub>series</sub>

- Light axis interval 80mm
- Anti Interference feature for adjacent installation (M/S switching)
- Longest -in-class detecting distance of 15 m
- Large indicators

#### Type

Throughbeam type  Throughbeam	Series	Detection method	Detecting distance	Light axis interval	No. of light axes	Detecting width	Set model No.	Operation mode	Detecting object
	<b>①</b>	Through-			2 4 6 8 10 12 14 16 18 20	80mm 240mm 400mm 560mm 720mm 880mm 1040mm 1200mm 1360mm 1520mm 1680mm	SS80-T2 SS80-T4 SS80-T6 SS80-T8 SS80-T10 SS80-T12 SS80-T14 SS80-T16 SS80-T18 SS80-T20	A (activated when beams of all axes are received)/O (activated when beam of any axis is received) switching     M/S switching     M: master     S: slave     (For prevention of interference between adjacently installed)	Opaque object of \$\phi\$92 mm min

#### Optional Parts

	Set model No.	del No. Discrete model No.		Description	
*	SS-H5	SS-H5L (for transmitter)	5m	Cord with connector	
	(Accessory)	SS-H5R (for receiver)	əm	(6.8mm outer diameter, four 0.5mm²	
Î	SS-H10	SS-H10L (for transmitter)	10m	cores, gray (transmitter) or black (receiver) covering)	
	33-1110	SS-H10R (for receiver)	TOTH		

#### Rating/Performance/Specification

Series	SS80 series					
Detection method	Through-beam type					
Detecting distance	3-15m max.					
Detecting object	Opaque object of $\phi$ 92 min.					
Light axis interval	80mm					
Power supply	12-24V DC ±10%					
Output modo	NPN open collector output Rating: sink current 100mA (30VDC) max.					
Output mode	(PNP output type (model No. ending with "-PN") is separately available)					
Operation mode	A/O mode switching A mode: activated when beams of all axes are received (deactivated when beam of any axis is blocked)					
Operation mode	O mode: activated when beam of any axis is received (deactivated when beams of all axes are blocked)					
Response time	15ms max.					
Light source(wavelength)	Infrared LED (880nm)					
Light-sensitive element	t Photo transistor					
Indicator	Transmitter: Power indicator (green LED) / M/S indicator (red LED) / Light axis alignment indicator (green LED)					
mulcator	Receiver: Operation indicator (red LED) / Stable light reception indicator (green LED) / Light axis alignment indicator (green LED)					
Switch (SW)	Transmitter: M/S mode switch provided					
SWILCH (SW)	Receiver: A/O mode switch provided					
Auxiliary functions	Anti Interference feature for adjacent installation, output short circuit protection					
Material	Case: aluminum / Front cover/lens: Acrylic					
Connection	Permanently attached cord with connector (cord length: 0.2m) / Cord with connector					
	Cord: with four 0.5mm² cores (Outer dimension: dia.6.8)					
Accessory	Cord with connector (cord length: 5m), mounting brackets, operation manual					
Notes	(PNP output type is separately available.)					
	Detection method Detecting distance Detecting object Light axis interval Power supply Output mode Operation mode Response time Light source(wavelength) Light-sensitive element Indicator Switch (SW) Auxiliary functions Material Connection Accessory					

### Environmental Specification

ation	Ambient light	9,000lx max.		
Environmental specification	Ambient temperature	-10 - +55°C (non-freezing)		
italsp	Ambient humidity	35-85%RH (non-condensing)		
onme	Protective structure	IP66		
Envir	Vibration	10 - 55Hz / 1.5mm amplitude / 2 hours each in 3 directions		

#### Indicator Operation

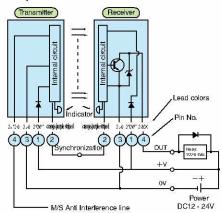

/	Name	Color	Description
3r	Power indicator	Green	Illuminated when power is supplied
Transmitter	M/S indicator	Red	Illuminated to indicate M mode Dis-illuminated to indicate S mode
Tra	Light axis alignment indicator	Green	Illuminated when power is supplied
Receiver	Stable light reception indicator	Green	I uminated when the receive ignt intensity level is 120% or more of the operation level
	Operation indicator	Red	Illuminated when output transistor is activated A: illuminated when light beams of all axes are received O: illuminated when light beam of any axis is received
	Light axis alignment indicator	Green	Illuminated when power is supplied

#### Specification by model

Set model	No. of	Detecting	Current consumption	Mass (about in g)	
No.	light axes	width	(mA)	Transmitter	Receiver
SS80-T2	2	80	50	250g	max.
SS80-T4	4	240	56	350g	max.
SS80-T6	6	400	63	450g	max.
SS80-T8	8	560	69	550g	max.
SS80-T10	10	720	75	650g	max.
SS80-T12	12	880	82	750g	max.
SS80-T14	14	1040	88	850g	max.
SS80-T16	16	1200	95	950g	max.
SS80-T18	18	1360	101	1050g	max.
SS80-T20	20	1520	107	1150g	max.
SS80-T22	22	1680	114	1250g	max.
SS80-T24	24	1840	120	1350g	max.

### **SS80**

#### Input/Output Circuit and Connection

- The output transistor turns off when load short circuit or overload occurs.
   Check the load and turn the power back on.
- When not using the Anti Mutual Interference feature, leave the M/S Anti Mutual Interference line unconnected and ensure it will not come in contact with any other cord.

Gray cord: 20cm

C/R: synchronization line M/S: Anti Interference line OUT: output

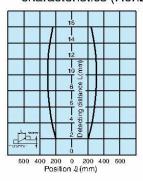

#### Characteristics (Typical Example)

 Parallel displacement characteristics (Longitudinal)

 Parallel displacement characteristics (Horizontal)

 Operating angle characteristics

 Smallest detectable object diameter characteristics

Ideal for comparatively large works as in detection of passage or ingress.

#### For Correct Use

- · Be sure to follow the instructions in the operation manual provided for correct use of the product.
- This sensor cannot be used as a press safety device or other safety device for protection of human body that requires conformity to domestic or overseas standards or certification concerning protection of human body. Use for such purposes may lead to death or serious injury in the unlikely event of failure.
- This sensor is intended for detection of ingress of human body or object passing through an arbitrary point not involving protection of human body or safety.
- When using this sensor for safety purposes, ensure safe operation of the system as a whole including detection and control.

#### M/S (master/slave) Switching

#### This feature is for prevention of interference. (With the screw on the back of the transmitter removed)

Set the switch of either transmitter to M (master) and of the other to S (slave) and connect the Anti Interference lines of both (purple (orange) = pin No. 4) to each other. The M/S indicator of the master transmitter is illuminated (when activated) and the M/S indicator of the slave transmitter remains unilluminated. For standalone use, be sure to set the switch to M to enable the M/S indicator.

#### Operation Mode Switching

(With the screw on the back of the receiver removed)

- A: output transistor activated when light beams of all axes are received (all axes reception ON)
- O: output transistor activated when light beam of any axis is received (any axis reception ON)

Output B

(Factory setting: A)

#### Anti Interference

- When using two sets of sensors installed adjacently, connect the Anti Interference lines (purple) of Transmitters A and B with each other.
- Connect the 0 V lines of the Transmitters A and B and
- Receivers A and B together.

  Set the M/S (master/slave) mode switch of Transmitter A to M and of Transmitter B to S.
- When all wiring has been completed, supply power and check the operation of the M/S indicators of the transmitters:
- Transmitter A (M mode): M/S indicator illuminated Transmitter B (S mode): M/S transmitter not illuminated
- When not using Anti Interference, leave the line for this feature unconnected and ensure it will not come in contact with any other cord.

### (Connection) A (transmitter) A (receiver) M mode Synchronization C/R Orange/Purple striped Brown DC12 - 24V

B (transmitter)

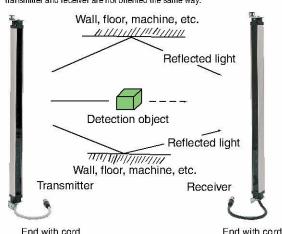

Orange/Purple striped Purple M/S (With more than one power supply) Anti Mutual Interference line

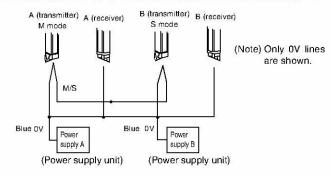

Synchronization C/R

Connect the O V lines of the Transmitters A and B and Receivers A and B together.

#### Notes on Installation

- Any reflecting object (wall, floor, machine, etc.) within the effective range between the transmitter and receiver may allow the light of the sensor to go around the detection object, which is supposed to block the light, and reach the receiver. Choose the installation location carefully.
- Make sure that the ends of the transmitter and receiver with the cord are oriented either upward or downward. The sensor does not function if the transmitter and receiver are not oriented the same way.

#### Cord Extension

C/R synchronization line (orange/purple striped)

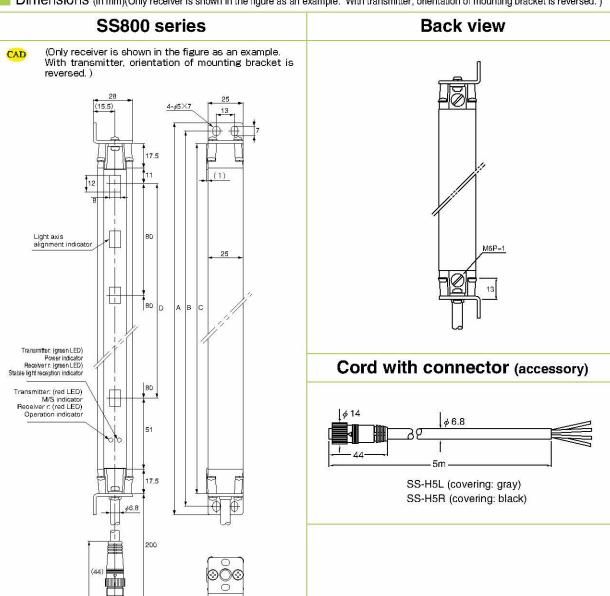

The total length of the cord between the transmitter and receiver should be within 50m.

M/S Anti Interference line (purple)

The total length of the cord between the transmitters of the two sets of sensors should be within 50m.

## **SS80**

Dimensions (in mm)(Only receiver is shown in the figure as an example. With transmitter, orientation of mounting bracket is reversed.)
